

Annual start of vegetation growing season and trends

This is the time series of the start of the vegetation growing season (day of the year) and the derived linear trends in the start of the vegetation growing season (in day / year). The start of the growing season time-series is based on the time series of the Plant Phenology Index (PPI). The PPI index is optimized for efficient monitoring of vegetation phenology and is derived from the source MODIS data using radiative transfer solutions applied to the reflectance in visible-red and near infrared spectral domains. The start of season indicator is based on calculating the start of the vegetation growing season from the annual PPI temporal curve.
