

## Extended wetland ecosystem layer 2012 (raster 100m) version 2, Jul. 2021

A great diversity of wetlands exists making the definition of a wetland ecosystem both challenging and controversial. The development of an extended wetland ecosystem layer according to the definition of the Ramsar convention is an explicit policy request in Europe which builds on an ecosystem-based justification of an inclusive definition, delimitation and delineation of wetlands, looking at the "hydro-ecological" boundaries of this ecosystem (including their wetness and flow characteristics).

This metadata refer to the raster dataset presenting the ecosystem wetlands extent in 2012. This includes 20 wetland classes which, besides inland and coastal wetlands, includes transitional ecosystems corresponding to wetlands such as riparian forests, wet grasslands, estuaries, or rice fields.

## Conformance result

<b>Date (Publication)</b>	2010-12-08
<b>Explanation</b>	See the referenced specification

<b>Statement</b>	<p>The dataset "Extended wetland ecosystem" is a derived product of the CLC layer for the year 2012 (v20) which has then been reclassified into 20 wetland classes on the basis of ancillary spatial layers ("Water and Wetness 2018" and "Riparian Zone Layer" Copernicus products, the "Ecosystem types of Europe" v3.1 and "The Global Spatial Water Explorer" datasets). Compared to the previous version (version 1, Nov. 2019), this dataset has been updated using the latest version of the Copernicus High Resolution Layer Water and Wetness (WAW) 2018, which fully replaces the previous incomplete product (v.1.1) and now identifies the "Temporary wet" class.</p> <p>The first holistic map of wetland ecosystems at European level (38 EIONET countries plus the UK), was produced and presented within the European Commission Mapping and Assessing Ecosystems and their Services Working Group (EC MAES WG), following an explicit policy request in Europe.</p> <p>Besides the traditional types of inland and coastal wetlands (i.e. marshes, rivers, lakes, lagoons, estuaries), the layer also covers the forest, grassland and agricultural ecosystems which are seasonally or permanently flooded (i.e. riparian forests, wet grasslands, rice fields) and are therefore considered as wetlands according to the Ramsar Convention definition and typology. This wetland reclassification and mapping considers their hydro-ecological characteristics and provides information about the real spatial extent and distribution of varied wetland habitats.</p>
------------------	--

For more details, please refer to the Wetland Thematic Assessment chapter (Maes et al., 2020; <http://publications.jrc.ec.europa.eu/repository/handle/JRC12038> 3)

Wetland habitats are defined based on the revised classification of the MAES nomenclature, and the guidelines set within the Horizon 2020 Satellite-based Wetland Observation Service (SWOS; <https://www.swos-service.eu/> )

The dataset has been validated against the regional wetland inventories of Andalusia and continental Greece.

## Overviews

**Extended wetland ecosystem layer 2012**

Ext\_wetland\_2012.tif

**Classes**

- Inland marshes
- Beaches, dunes, sand
- Coastal lagoons
- Coastal saltpans (highly artificial salinas)
- Intertidal flats
- Lakes, ponds and reservoirs
- Managed or grazed wet meadow or pasture
- Marine waters less than six metres deep at low tide
- Natural seasonally or permanently wet grasslands
- No Wetland
- Open mires
- Rice Fields
- Riparian, fluvial and mixed forest
- Riparian, fluvial and swamp broadleaved forest
- Riparian, fluvial and swamp coniferous forest
- River estuaries and estuarine waters of deltas
- Riverine and fen scrubs
- Salt marshes
- Water courses
- Wet heaths
- Outside coverage
