

## EUNIS grassland and lands dominated by forbs, mosses or lichens habitat types, distribution based on vegetation plot data - version 1, Nov. 2021

This metadata corresponds to the EUNIS grasslands and lands dominated by forbs, mosses or lichens habitat types, distribution based on vegetation plot data dataset.

These habitat types correspond to non-coastal land which is dry or only seasonally wet (with the water table at or above ground level for less than half of the year) with greater than 30% vegetation cover. The vegetation is dominated by grasses and other non-woody plants, including mosses, macrolichens, ferns, sedges and herbs. Includes semiarid steppes with scattered Artemisia scrub. Includes successional weedy vegetation. Excludes regularly tilled habitats (V1) dominated by cultivated herbaceous vegetation such as arable fields and managed grasslands such as recreation fields and lawns.

The verified grasslands and lands dominated by forbs, mosses or lichens habitat samples used are derived from the Braun-Blanquet database ( [http://www.sci.muni.cz/botany/vegsci/braun\\_blanquet.php?lang=en](http://www.sci.muni.cz/botany/vegsci/braun_blanquet.php?lang=en) ) which is a centralised database of vegetation plots and comprises copies of national and regional databases using a unified taxonomic reference database. The geographic extent of the distribution data are all European countries except Armenia and Azerbaijan. The dataset is provided both in Geodatabase and Geopackage formats.

### Conformance result

<b>Date (Publication)</b>	2010-12-08
<b>Explanation</b>	See the referenced specification

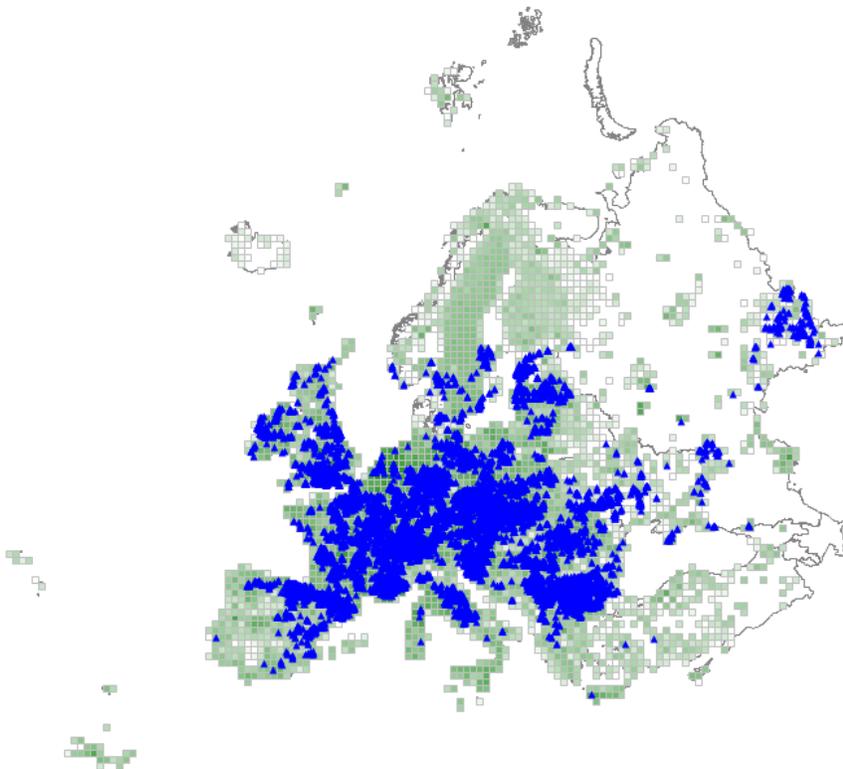

<b>Statement</b>	<p>The database compiled for the Braun-Blanquet project comprises various national and regional vegetation databases. The maintenance of these databases is in principle in the hands of the custodians. However, before uploading datasets into the Braun-Blanquet database a quality check is performed by Alterra and Masaryk University. If possible, detected errors are corrected and reported back to the data provider. Attributes added to the distribution data are: YEAR (year of recording) and PRECISION (precision in meters, indicating how precise the location is indicated).</p> <p>More information can be found in the Braun-Blanquet project website: <a href="http://www.sci.muni.cz/botany/vegsci/braun_blanquet.php?lang=en">http://www.sci.muni.cz/botany/vegsci/braun_blanquet.php?lang=en</a> .</p>
------------------	--

Supporting information on the creation of this dataset is available in the ETC/BD Technical paper 9/2018: Distribution and habitat suitability maps of revised EUNIS grassland, heathland, scrub, tundra and forest types at: [https://www.eionet.europa.eu/etcs/etc-bd/products/etc-bd-reports/maps\\_revised\\_eunis\\_grassland\\_heath\\_scrub\\_tundra\\_forest](https://www.eionet.europa.eu/etcs/etc-bd/products/etc-bd-reports/maps_revised_eunis_grassland_heath_scrub_tundra_forest) .
