

Urban Waste Water Treatment Directive, Agglomerations reported under UWWTD data call 2019 - INTERNAL VERSION, Jan. 2022

UWWTD Agglomerations, Jan. 2022 is one of the datasets produced within the frame of the reporting under 11th UWWTD Art.15 reporting period (UWWTD data call 2019).

The Urban Waste Water Treatment Directive (UWWTD) (91/271/EEC) obliges Member States to report data on the implementation of the Directive upon request from the European Commission bi-annually. Reported data include receiving areas as designated under UWWTD, agglomerations, urban waste water treatment plants serving the agglomerations and points of discharges.

Dataset UWWTD_Agglomerations contains agglomerations reported by countries with generated load 2000 p.e. (or even smaller), including names, coordinates, generated load and information whether the load generated is collected through collecting system or addressed via Individual Appropriate Systems (IAS) or not collected not addressed via IAS.

This metadata refers to the internal dataset which contains all reported agglomerations, including inactive ones. Agglomerations with obviously wrong coordinates were excluded only.

The public dataset excluding inactive agglomerations can be found under the entry "Urban Waste Water Treatment Directive, Agglomerations reported under UWWTD data call 2019 - PUBLIC VERSION, Jan. 2022" (<https://sdi.eea.europa.eu/catalogue/srv/eng/catalog.search#/metadata/7c26ff2c-d1b1-4533-95e6-29b34d29fe0e>).

In comparison to the previous version (Nov. 2020), late redeliveries and corrections provided by several countries during 2021 are included in current revision. Next, the dataset is provided in GeoPackage and ESRI File geodatabase formats instead of shapefile used up to now, to avoid truncation of attribute names.

Explanation	See the referenced specification

Statement	<p>Agglomerations data were reported by Member states in tabular format. Spatial position of individual agglomerations was specified by the geographical coordinates fields (longitude, latitude). These tabular data were checked, grouped into a common Pan-European dataset and transformed to the spatial data layer in GIS software. Agglomerations with obviously wrong coordinates were removed.</p> <p>If the agglomeration coordinates were not reported, given agglomeration was not excluded (= missing information, coordinates are unknown); on the transformation from reported tabular format to the spatial point layer in GIS, records with missing coordinates were not transferred to the points visible in the data layer, of course, but they are available in the attribute table and their coordinates agglLatitude and agglLongitude in the attribute table are NULL.</p>
