

Copernicus Boundary Layers with 250m buffer

The Copernicus boundary layers cover the EEA38 member states and United Kingdom including the French DOM (French Guiana GF, Guadeloupe GP, Martinique MQ, Mayotte YT and Reunion RE).

The Copernicus Boundary Layer provides both land masks for the countries as well as national boundaries. The datasets are based on a rasterisation of the Boundary Layer vector product. The raster products are available with 250 m buffer in these resolutions: raster 10m, raster 20m and raster 100m.

The production of the Border Products was coordinated by the European Environment Agency in the frame of the EU Copernicus programme. The use of the raster 10m, raster 20m and the vector data has to be agreed with EEA.
