

Copernicus High Resolution Water Snow and Ice Monitoring layers

The Copernicus Land Monitoring Service (CLMS) delivers the High Resolution Water, Snow, and Ice (HR-WSI) portfolio, providing detailed monitoring of snow, ice, and water bodies across Europe. This portfolio includes products derived from Sentinel-1 and Sentinel-2 satellite data, offering high-resolution maps with pixel spacing ranging from 60m to 10m. The HR-WSI products are essential for various sectors, including water management, energy, infrastructure safety, and climate change research. The portfolio covers snow properties on land, ice occurrences in the hydrographic network, and changes in water bodies at annual and multi-annual scales. These products are freely and openly accessible, benefiting stakeholders at local, national, and European levels. The HR-WSI portfolio continues the High Resolution Snow & Ice (HR-S&I) project, expanding to include water products and ensuring comprehensive monitoring of these critical environmental parameters.
