

Interpolated air quality data

Interpolated data showing air quality in Europe. The dataset has been reorganised in order to improve data harmonization among years and to facilitate storage and processing of the interpolated maps for the EEA data services. The data are derived primarily from e-Reporting database stations monitoring data, additional EMEP stations monitoring data, supplemented with additional data such as, for instances, altitude, meteorological ECMWF data and EMEP concentration modeling data. These maps are assessment tools for use at the European scale. They may show results which differ from assessments made at national scale
