Copernicus EEA38 Boundary Layer with 250 m buffer (raster 5m), version 1, Nov. 2022

For the provision of land monitoring services within the Copernicus programme, a consistent, stable, sufficiently detailed boundary layer is required at EEA, which provides a “land mask” for the area that needs to be monitored.

This metadata refers to the Copernicus boundary layer covering EEA38 member countries in raster format (TIFF) at 5m resolution, excluding the French DOM (French Guiana GF, Guadeloupe GP, Martinique MQ, Mayotte YT and Reunion RE).

The production of this Border Product was coordinated by the European Environment Agency in the frame of the EU Copernicus programme.

Report

Result

Title	Commission Regulation (EU) No 1089/2010 of 23 November 2010 implementing Directive 2007/2/EC of the European Parliament and of the Council as regards interoperability of spatial data sets and services
Date (Publication)	2010-12-08
Explanation	See the referenced specification

Resource lineage

Statement	The dataset is based on a rasterisation of the Boundary Layer vector product, a generalisation of the Border Expert product to a scale of about 1:1 000 000 (a buffer of 250m is applied). This Border Expert product is based on EU-Hydro Coastline Version 3 from EEA, the EEA coastline for analysis Version 2, the EBM GISCO Hybrid Layer from EEA, the EuroGeographics EuroBoundary Map Version 12, the “Water and Wetness High Resolution Layer 2015” from EEA and the JRC-Global Surface Water Occurrence layer. The territory of the United Kingdom has been removed, due to its exit from the EEA. This dataset was created by resampling the 10m EEA38 raster boundary file to 5m spatial resolution. The resampling process does not change the area for any of the classes, nor does it change the shape of the outlines of the raster. The appearance is the same, compared to the 10m product, but one 10m pixel is split into four 5m pixels. The details of the production process is explained under 'links' in the "Product information (EEA38)".
