

Urban Waste Water Treatment Directive, Agglomerations reported under UWWTD data call 2021 - PUBLIC VERSION, Jan. 2023

UWWTD Agglomerations, Jan. 2023 is one of the datasets produced within the frame of the reporting under 12th UWWTD Art.15 reporting period (UWWTD data call 2021).

The Urban Waste Water Treatment Directive (UWWTD) (91/271/EEC) obliges Member States to report data on the implementation of the Directive upon request from the European Commission bi-annually. Reported data include receiving areas as designated under UWWTD, agglomerations, urban waste water treatment plants serving the agglomerations and points of discharges.

Dataset UWWTD_Agglomerations contains agglomerations reported by countries with generated load 2000 p.e. (or even smaller), including names, coordinates, generated load and information whether the load generated is collected through collecting system or addressed via Individual Appropriate Systems (IAS) or not collected not addressed via IAS.

This dataset includes the reported agglomerations which are displayed on the UWWTD maps (<https://www.eea.europa.eu/themes/water/european-waters/water-use-and-environmental-pressures/wwtd/interactive-maps/urban-waste-water-treatment-maps-3>). The active agglomerations with correct coordinates in the reported data were selected from the source European UWWTD tabular dataset, which is available on the download link <https://www.eea.europa.eu/data-and-maps/data/waterbase-wwtd-urban-waste-water-treatment-directive-9>.

The definition of the UWWTD Agglomerations dataset attributes (fields) is available on the link <https://dd.eionet.europa.eu/datasets/latest/UWWTDArt15/tables/Agglomerations>

The internal dataset which includes the inactive agglomerations as well is available under "Urban Waste Water Treatment Directive, Agglomerations reported under UWWTD data call 2021 - INTERNAL VERSION, Jan. 2023" (<https://sdi.eea.europa.eu/catalogue/inspire-pds/eng/catalog.search#/metadata/c4590c8f-128b-49f0-a6b4-9be988b7758b>).

The published output contains data reported in 2022. Current output is provisional, as it is subject to the Commission's compliance check, following which some records may be amended and further information will be added.

The dataset is provided in GeoPackage and ESRI File geodatabase formats.

Additional Information	The directive imposes different reporting obligations (Situation report according to Article 16 and implementation programme according to Article 17). The data presented in the UWWTD Waterbase pertains to Articles 15 and 17 of the Directive, which stipulates that discharges from urban waste water treatment plants and amounts and composition of sludges disposed to surface waters must be monitored to verify the compliance with specific provisions of the Directive. Some technical insight and familiarity with the terms and contexts used for the implementation of the UWWTD is required to make use of the tables. By linking the information in the tables on agglomerations, UWWTPs, discharge points and receiving areas it is possible to obtain a complete picture showing what type of treatment is applied to treat waste water generated in specific agglomeration, what is the character of the area (e.g. water body) receiving discharges from waste water treatment plans or collecting systems without treatment. The content of the table with additional data can be used for further quantitative analyses on emissions from UWWTPs with different types of treatment and various size categories. A QA-document describes a flagging of some of the provided data according to certain criteria. These flags should be considered by the user for specific purposes. All the tables from Waterbase can be downloaded for use by all stakeholders according to below Rights. Lists and explanation of codes can also be shown and downloaded from Additional information - Code Lists. Link to further details on reporting guidelines is given from below Reporting Obligations.

Explanation	See the referenced specification
Statement	Agglomerations data were reported by Member states in tabular format. Spatial position of individual agglomerations was specified by the geographical coordinates fields (longitude, latitude). These tabular data were checked, grouped into a common Pan-European dataset and transformed to the spatial data layer in GIS software. Inactive agglomerations and agglomerations without coordinates or with obviously wrong coordinates were removed. Tabular data is accessible here: https://sdi.eea.europa.eu/data/3a69dbaf-15d8-443d-a0ff-fa2c4bb8ab0d/Tabular/ Description of dataset and definition is accessible under 'Links'.
