

## EUNIS Inland habitats with no or little soil and mostly with sparse vegetation, distribution based on vegetation plot data - version 1, Nov. 2021

This metadata corresponds to the EUNIS Inland habitats with no or little soil and mostly with sparse vegetation, distribution based on vegetation plot data dataset.

These habitat types are non-coastal habitats on substrates with no or little development of soil, mostly with less than 30% vegetation cover which are dry or only seasonally wet (with the water table at or above ground level for less than half of the year). Habitats which may have a high vegetation cover include crevices of rocks, scree or cliffs and habitats formed by carpets of moss. Includes subterranean non-marine caves and passages including underground waters and disused underground mines and habitats characterised by the presence of permanent snow and surface ice other than marine ice bodies

The verified inland habitats with no or little soil and mostly with sparse vegetation samples used are derived from the Braun-Blanquet database ([http://www.sci.muni.cz/botany/vegsci/braun\\_blanquet.php?lang=en](http://www.sci.muni.cz/botany/vegsci/braun_blanquet.php?lang=en)) which is a centralised database of vegetation plots and comprises copies of national and regional databases using a unified taxonomic reference database. The geographic extent of the distribution data are all European countries except Armenia and Azerbaijan. The dataset is provided both in Geodatabase and Geopackage formats.

| Explanation        | See the referenced specification |

|           |   |
|-----------|---|
| Statement | <p>The database compiled for the Braun-Blanquet project comprises various national and regional vegetation databases. The maintenance of these databases is in principle in the hands of the custodians. However, before uploading datasets into the Braun-Blanquet database a quality check is performed by WENR and Masaryk University. If possible, detected errors are corrected and reported back to the data provider. Attributes added to the distribution data are: YEAR (year of recording) and PRECISION (precision in meters, indicating how precise the location is indicated).</p> <p>More information on the generation of the spatial files is provided in the documents available for download together with the dataset.</p> |
