

European and Mediterranean Basin extract of LandScan Global Population Database

This dataset consists of the LandScan global population database clipped to Europe together with the Mediterranean Basin, converted into a population density dataset and reprojected to EPSG:3035 (Lambert Azimuthal Equal Area 52N10E / ETRS89) with a spatial resolution of 1km². The methodology applied aimed at minimizing any discrepancy in population counts between the original data and the reprojected data at country level.

Content: population count per grid cell.
