

Population trend of bird species: datasets from Article 12, Birds Directive 2009/147/EC reporting

All EU Member States are requested to monitor birds listed in the Birds Directive (2009/147/EC) and send every 6 years a report about the progress made with the implementation of the Directive, every 6 years following an agreed format. The assessment of breeding population short-term trend at the level of country is here presented in the spatial dataset that contains gridded birds distribution data (10 km grid cells) as reported by EU Member States.

The tabular dataset includes information on population size and trends for birds populations, pressures and threats and the population status and trends at the EU level.

This metadata refers to both public datasets and to dataset with restricted access only to be used internally by EEA.
