

## European Red Lists of species

The European Red Lists of species is a review of the conservation status of more than 10 000 European species (mammals, birds, reptiles, amphibians, freshwater and marine fishes, butterflies, dragonflies, freshwater molluscs, selected groups of beetles, terrestrial molluscs, vascular plants including medicinal plants, bees, grasshoppers, locusts and crickets, lycopods and ferns), according to IUCN regional Red Listing guidelines applied to the EU28 and to the Pan-European level.

New in the 2017 December version of the database is the updated European Red List of saproxylic beetles.

<b>Additional Information</b>	<p>The Red List identifies those species that are threatened with extinction at the European level so that appropriate conservation action can be taken to improve their status.</p> <p>European red list assessments so far have been done at two geographical levels:</p> <p>1) EU level : European part of the territory of the EU28, EU27 or EU25 as stated in the specific table (including Canary Islands, Madeira and Açores)</p> <p>2) Pan-European level : this level is including all European countries (including the entire area in level 1), the European part of Türkiye and the European part of Russia up to the Ural, but excluding the Russian Caucasus, Anatolian Türkiye and the other Caucasus countries.</p> <p>Exceptions from this approach has been taken by the EU Red list of freshwater fishes, where the Pan-European level assessment includes the entire Black sea basin, the northern Caspian sea basin and hence the northern Caucasus in general.</p> <p>For the Red List of Marine Fishes, no distinction has been made between the EU28 and the Pan-European assessment. In addition, for practical reasons, the European Red List of Marine Fishes covers the entire Mediterranean sea rather than only its European part.</p> <p>The year of delivery and the number of species assessed by group is as follows</p> <p>Delivery year   Group   Number of assessed species</p> <p>2009   mammals; reptiles and amphibians   261; 237</p> <p>2010   butterflies; dragonflies; saproxylic beetles (living in deadwood)   483; 142; 436</p> <p>2011   vascular plants; freshwater molluscs; terrestrial molluscs; freshwater fishes   1826; 868; 1234; 532</p> <p>2015   medicinal plants; birds; bees; marine fishes   400; 533; 1965; 1220</p> <p>2016   grasshoppers, locusts and crickets   1082</p> <p>2017   lycopods and ferns; saproxylic beetles (update)   194; 693</p>
