

## EEA 2023 proxies on primary and final energy consumption

The recast Energy Efficiency Directive (EU) 2023/1791 sets a binding target for 2030 of 763 million tonnes of oil equivalent (Mtoe) for final energy consumption (FEC), and an indicative target of 992.5Mtoe for primary energy consumption (PEC).

Since early access to the most recent information on energy consumption is relevant for all stakeholders, the EEA and its European Topic Centre for Climate Change Mitigation and Energy (ETC/CME) produce each year a set of early estimates concerning the consumption of primary and final energy in the previous year, across the EU as a whole and in each Member State. These estimates are compatible with the scope of the energy efficiency targets for 2020 and 2030, and they correspond to the indicator codes PEC2020-2030 and FEC2020-2030 from Eurostat.

The current data set covers the EEA 2023 approximated data on primary and final energy consumption (PEC2020-2030; FEC2020-2030).

<b>Additional Information</b>	The energy consumption approximated data for 2023 are presented per Member State, and for the EU as a whole, as primary and final energy consumption expressed in Million tonnes of oil equivalent (Mtoe). The EEA 2023 approximated data on primary and final energy consumption formed the basis of a specific EEA country consultation. Where national data were provided during the consultation, they have been used. Nevertheless, these early estimated values do not substitute official data that Member States report to Eurostat and to the European commission in the context of their legal obligations.
