

Copernicus EEA38 Boundary Layer with 250 m buffer (raster 10m), version 2, Nov. 2023

For the provision of land monitoring services within the Copernicus programme, a consistent, stable, sufficiently detailed boundary layer is required at EEA, which provides a "land mask" for the area that needs to be monitored.

This metadata refers to the Copernicus boundary layer covering EEA38 in raster format (TIFF) at 10m resolution, including the French DOM (French Guiana GF, Guadeloupe GP, Martinique MQ, Mayotte YT and Reunion RE). The territory of the United Kingdom has been removed, due to its exit from the EEA.

The production of this Border Product was coordinated by the European Environment Agency in the frame of the EU Copernicus programme. The use of this data has to be agreed with EEA.

Explanation	See the referenced specification
Statement	The dataset is based on a rasterisation of the Boundary Layer vector product, a generalisation of the Border Expert product to a scale of about 1 : 1 000 000 (a buffer of 250m is applied). This Border Expert product is based on EU-Hydro Coastline Version 3 from EEA, the EEA coastline for analysis Version 2, the EBM GISCO Hybrid Layer from EEA, the EuroGeographics EuroBoundary Map Version 12, the "Water and Wetness High Resolution Layer 2015" from EEA and the JRC-Global Surface Water Occurrence layer. The territory of the United Kingdom has been removed, due to its exit from the EEA. This version supersedes version 1 that contained erroneous pixels covering in all 0.2969 km² spread over 4 different locations. The details of the production process is explained under 'links' in the "Product information (EEA38)".
