

## European catchments and Rivers network system (Ecrins), gazetteer - version 1, Jun. 2012

This data set, albeit a geodatabase, does not contain feature classes. For the time being, it only contains flat tables Rinames (river names) that links to C\_TR feature class with ID Riv\_ID (river identifier) and to RivNamesAlias, when more than one alternate name was found for the river.

Ancillary table Tr2Riv makes another updated relationship between segments (as from C\_Tr) and RivNames / RivNamesAlias in case of need to compute some statistics (e.g. named rivers per basin, etc.)

When relevant, other gazetting could be added to this data set and will be documented in next releases.

The graphic shows the rivers names (excluding those unnamed).

## Conformance result

<b>Date (Publication)</b>	2010-12-08
<b>Explanation</b>	See the referenced specification

<b>Statement</b>	Names are taken from several sources, of which open source national datasets, art 13 deliveries (water bodies having reference to a river in national system), dams database (dam is often documented with the river on which it is), Wikipedia (when rivers is inlet /outlet of lake) and ERM. Names are assigned by the most probable identity between a source and a segment in Ecrins, following the affluent levels. In next release, monitoring information shall be mobilised as well.
