Copernicus EEA38 Boundary Layer with 250 m buffer (vector), version 1, Nov. 2022

For the provision of land monitoring services within the Copernicus programme, a consistent, stable, sufficiently detailed boundary layer is required at EEA, which provides a "land mask" for the area that needs to be monitored.

This metadata refers to the Copernicus boundary layer covering EEA38 in vector format (SHP and GDB), including the French DOM (French Guiana GF, Guadeloupe GP, Martinique MQ, Mayotte YT and Reunion RE).

The production of this Border Product was coordinated by the European Environment Agency in the frame of the EU Copernicus programme.

IMPORTANT NOTE: This dataset is only available for internal use within EEA in the context of the EU Copernicus programme. Copyright restrictions apply, as in this product ungeneralised data from EuroGeographics EuroBoundary Map Version 12 is included. Use of this dataset has therefore to be agreed with EEA and ultimately with EuroGeographics.

Explanation	See the referenced specification

Statement	The dataset is based on a generalisation to a scale of about 1:1 000 000 (a buffer of 250m is applied) of the Copernicus Border Expert product. The Copernicus Border Expert product is based on:
	* the EU-Hydro Coastline Version 3 from EEA
	* the EEA coastline for analysis Version 2
	* the EBM GISCO Hybrid Layer from EEA
	* the EuroGeographics EuroBoundary Map Version 12
	* the "Water and Wetness High Resolution Layer 2015" from EEA
	* the JRC-Global Surface Water Occurrence layer.
	The territory of the United Kingdom has been removed, due to its exit from the EEA.
	IMPORTANT NOTE: This dataset is only available for internal use within EEA in the context of the EU Copernicus programme. Copyright restrictions apply, as in this product ungeneralised data from EuroGeographics EuroBoundary Map Version 12 is included. Use of this dataset has therefore to be agreed with EEA and ultimately with EuroGeographics.
