

## Conservation status of habitat types and species: datasets from Article 17, Habitats Directive 92/43/EEC reporting

All Member States are requested by the Habitats Directive (92/43/EEC) to monitor habitat types and species listed in its annexes and send a report every 6 years following an agreed format. The assessment of conservation status is based on information about the status and trends of species populations and of habitats at the level of the biogeographical or marine region.

The spatial dataset contains habitat and species distribution data (10km grid cells) as reported by Member States.

The tabular dataset this includes information on habitat areas, population sizes, trends, pressures and threats, and conservation status at the national biogeographical level and on conservation status and trends in conservation status at the EU biogeographical level.

This metadata refers to:

- 1) the public dataset, without sensitive species,
- 2) the full dataset, which includes data on sensitive species. This dataset is with restricted access only to be used internally by EEA.
