

EUNIS habitat type G1.9a distribution based on vegetation plot data - version 1, Jan. 2015

The verified habitat samples used are derived from the Braun-Blanquet database (http://www.sci.muni.cz/botany/vegsci/braun_blanquet.php?lang=en) which is a centralised database of vegetation plots and comprises copies of national and regional databases using a unified taxonomic reference database.

Explanation	See the referenced specification

Statement	<p>The database compiled for the Braun-Blanquet project comprises various national and regional vegetation databases. The maintenance of these databases is in principle in the hands of the custodians. However, before uploading datasets into the Braun-Blanquet database a quality check is performed by Alterra and Masaryk University. If possible, detected errors are corrected and reported back to the data provider. Attributes added to the distribution data are: PLOTSOBSID (reference to the PlotObservationID in the database 'European Vegetation Data (2014 EUNIS forests).db') and PRECISION_M (precision in meters, indicating how precise the location is indicated).</p>
