

Copernicus EEA39 Boundary Layer with 250 m buffer (vector), version 3, Jan. 2019

For the provision of land monitoring services within the Copernicus programme, a consistent, stable, sufficiently detailed boundary layer is required at EEA, which provides a "land mask" for the area that needs to be monitored.

This metadata refers to the Copernicus boundary layer covering EEA38 and the United Kingdom (former EEA39) in vector format (GDB, SHP), including the French DOM (French Guiana GF, Guadeloupe GP, Martinique MQ, Mayotte YT and Reunion RE).

The dataset is based on a generalisation to a scale of about 1:1 000 000 (a buffer of 250m is applied) of the Copernicus Border Expert product, which is based on the EU-Hydro Coastline Version 3 from EEA, the EEA coastline for analysis Version 2, the EBM GISCO Hybrid Layer from EEA, the EuroGeographics EuroBoundary Map Version 12, the "Water and Wetness High Resolution Layer 2015" from EEA and the JRC-Global Surface Water Occurrence layer.

The production of this Border Product was coordinated by the European Environment Agency in the frame of the EU Copernicus programme. The use of this data has to be agreed with EEA.

Conformance result

Date (Publication)	2010-12-08
Explanation	See the referenced specification

Statement	The dataset is based on EU-Hydro Coastline Version 3 from EEA, the EEA coastline for analysis Version 2, the EBM GISCO Hybrid Layer from EEA, the EuroGeographics EuroBoundary Map Version 12, the "Water and Wetness High Resolution Layer 2015" from EEA and the JRC-Global Surface Water Occurrence layer. The data is generalized to a scale of about 1:1 000 000 (a buffer of 250m is applied). The production process is explained in the document provided with the dataset.
