EEA geospatial data catalogue

EEA reference GRID for Malta in 1, 10 and 100 km (vector), version Oct. 2026

This dataset provides the reference grids for Malta. The grids are based on a proposal from the 1st European Workshop on Reference Grids in 2003 and aligns with the INSPIRE geographical grid systems.

The grids are available at resolutions of 1 km, 10 km, and 100 km, and at different geographical scales (national or EEA country coverage). They cover at least the country borders and, where applicable, a marine area derived from the Exclusive Economic Zones (EEZ), version 12.0. Note that the extent of the grids into the marine area does not represent the extent of Malta's territorial waters.

The grid data are provided in GeoPackage and ESRI geodatabase formats.

Report

Result

Title	Commission Regulation (EU) No 1089/2010 of 23 November 2010 implementing Directive 2007/2/EC of the European Parliament and of the Council as regards interoperability of spatial data sets and services
Date (Publication)	2010-12-08
Explanation	See the referenced specification

Resource lineage

Statement	The reference grids are based on ETRS89 Lambert Azimuthal Equal Area projection with parameters: latitude of origin 52°N, longitude of origin 10°E, false northing 3210000.0m, false easting 4321000.0m. The origin of the grid is calculated from 0 mN, 0 mE in the projection. The grids are created at different resolutions (1, 10, 100km) and by different geographic scales (National level, EEA country coverage). Each grid will always cover terrestrial boundaries and, when applicable, marine regions, with a 20km buffer around them. The terrestrial area is extracted from EuroBoundaryMap v? by Eurogeographic, while the marine area is delineated from the EEZ (version 12); note that the grid extent into the marine area does not reflect the extent of territorial waters. The method followed the instructions for the EEA fishnet tool described in the EEA GIS guideline available from http://www.eionet.europa.eu/gis. All grids have been created using the script described in the EEA GitHub. Additionally, a readme.txt file is available in the same subfolder of the data .
