

Copernicus EEA38 Boundary Layer with 250 m buffer (raster 20m), version 1, Nov. 2022

For the provision of land monitoring services within the Copernicus programme, a consistent, stable, sufficiently detailed boundary layer is required at EEA, which provides a "land mask" for the area that needs to be monitored.

This metadata refers to the Copernicus boundary layer covering EEA38 in raster format (TIFF) at 20m resolution, excluding the French DOM (French Guiana GF, Guadeloupe GP, Martinique MQ, Mayotte YT and Reunion RE).

Conformance result

Date (Publication)	2010-12-08
Explanation	See the referenced specification
Statement	The dataset is based on a rasterisation of the Boundary Layer vector product, a generalisation of the Border Expert product to a scale of about 1 : 1 000 000 (a buffer of 250m is applied). This Border Expert product is based on EU-Hydro Coastline Version 3 from EEA, the EEA coastline for analysis Version 2, the EBM GISCO Hybrid Layer from EEA, the EuroGeographics EuroBoundary Map Version 12, the "Water and Wetness High Resolution Layer 2015" from EEA and the JRC-Global Surface Water Occurrence layer. The data is generalized to a scale of about 1 : 1 000 000 (a buffer of 250m is applied). The territory of the United Kingdom has been removed, due to its exit from the EEA. The details of the production process is explained under 'links' in the "Product information (EEA38)".
