

Land Uptake per Person (inhabitants and jobs) (LUP) 2009 (LEAC Grid), Nov. 2016

The new urban sprawl metric, named "Weighted Urban Proliferation" (WUP) is based on the following definition of urban sprawl: the more area is built over in a given landscape (amount of built-up area) and the more dispersed this built-up area is in the landscape (spatial configuration), and the higher the uptake of built-up area per inhabitant or job (lower utilisation intensity in the built-up area), the higher the degree of urban sprawl.

Weighted Urban Proliferation (WUP) metric has three components: the percentage of built-up areas (PBA), the dispersion of the built-up areas (DIS), and land uptake per person (LUP).

Land uptake per person (inhabitants and jobs) (LUP) describes the use of urban built-up area by people working and living in that area.

Conformance result

Date (Publication)	2010-12-08
Explanation	See the referenced specification

Statement	<p>The mapping computation steps are:</p> <ol style="list-style-type: none"> 1) A built-up areas were selected from the raster High Resolution Layer – Imperviousness Degree (HRL IMD). Only these pixels, where IMD value $\geq 30\%$ were selected as built-up. 2) The built-up areas layer together with the reference units layer were inputs to the computations (NUTS0, NUTS2 and 1km LEAC grid were used as the reference layers) 3) LUP values were computed by equations described in https://www.wsl.ch/fileadmin/user_upload/WSL/Services_Produkte/Software_Apps/USM/USM-Toolset-User-Manual.pdf (pages 2 and 17-18) 4) Newly developed tool called “Urban Sprawl Metric Tool” is available on the https://www.wsl.ch/en/services-and-products/software-websites-and-apps/urban-sprawl-metrics-usm-toolset.html
